Quarterly Market Commentary

First Quarter 2025 – April 9, 2025

Headlines have often been unsettling this year. Trade tensions, recession fears, inflation concerns, and federal budget cuts have contributed to market gyrations. Stock-market volatility spiked in late February and early March, and the S&P 500 dipped into correction territory.

This kind of turbulence can be worrying. Fortunately, perspective can help calm frazzled nerves.

Investors often associate volatility with losses, but that's not the full picture. Volatility measures how much asset prices fluctuate relative to an average—both up and down.

Remember: Investing isn't about chasing the biggest returns; it's about maximizing your ability to achieve your life goals.

Periods of heightened market volatility can create a sense of uncertainty, but they don't necessarily signal long-term decline. History has shown that markets often recover—and even grow significantly—after turbulent stretches.

While short-term fluctuations may be dramatic, maintaining a disciplined, long-term investment approach can position investors to benefit from future rebounds. For long-term investors, it's important to maintain perspective during these times.

A Word on Down Markets

The **S&P 500 lost 4.6%** in the first quarter of 2025. Between February 19 and **mid-March**, it fell more than 10% from its high, inching into correction territory.

It's completely natural to feel uneasy when markets decline, but once again, perspective is key. Remember that no one can predict the future, which may look very different than the recent past. As CFA Rubin Miller put it in his **newsletter**, "The market is never 'going down'—it only has gone down and may go down further." Stocks may turn up six months from now or this afternoon.

Downturns are a routine part of market cycles. Naming these drops can be empowering—much like the tale of Rumpelstiltskin, in which a young woman gains power over a troublesome little man after discovering his name. To that end:

- A dip is a small, temporary drop in stock prices
- A correction is a decline of 10% to 20%
- A bear market is a loss of 20% or more

Downturns are fairly frequent, and they don't last forever. The S&P 500 has had **27 corrections** since November 1974, including the one in March. Only six of those became bear markets.

What's more, upturns tend to last a lot longer than downturns. There have been **18 bear markets** in the S&P 500 since 1926, lasting a total of 177 months. By contrast, there have been 19 bull markets, and they have lasted nearly 1,000 total months.

A correction does not necessarily mean a bad year. The broad Russell 3000 stock index had intra-year declines of at least 10% in 25 of the last 45 calendar years, according to research from Dimensional. The index ended the year up in 17 of those 25 years.

Charting a Course

The market may have you feeling seasick about now. But through all the ups and downs over the years, stocks have stayed on a positive long-term trajectory. Your portfolio is designed to help you capitalize on the market's long-term growth, with proper diversification and rebalancing to help manage the rough times. Only changes in your goals or circumstances should require adjustments to your plan.

Regards,

Eric Hutchens

Global Fixed Income

Yield curves (USD), 1st Quarter 2025

With the exception of Canada and Japan, interest rates generally decreased in the short- to intermediate-term segment and increased in the longer-term segment across global developed markets for the quarter.

Realized term premiums were generally mixed across global developed markets. With the exception of the US, longer-term bonds generally underperformed shorter-term bonds during the period.

In Canada, interest rates decreased across all maturity segments. In Japan, interest rates increased across all maturity segments. The short-term segment of the yield curve remained inverted in Germany, Canada and Australia. However, the short-term segment of the yield curve in the UK became upwardly sloped.
